

File Scrub Trusted Copy and File Scrub Software Download and Installation Instructions for Mac OS X

Before you can download File Scrub or File Scrub Trusted Copy, you must submit the Conditions of Use form from the File Scrub Web site Download page. You will receive a confirmation of eligibility and a file, `FileScrubKey.ser`.

Warning: If you have File Scrub's predecessor software, MPTC, and/or the MPTC Decryption Tool, installed on your computer, we highly recommend that you uninstall both applications **before** you install File Scrub. Please see the Uninstall instructions in `MptcMacInstructions.pdf` available at <http://mptc.lanl.gov/downloads.shtml>.

Configuration File Note: If you have an existing configuration file from MPTC that you spent considerable time editing, save it to a location on your computer other than the MPTC installation location before you uninstall MPTC. You can copy your path information and external tools list from the MPTC configuration file into the File Scrub configuration file.

If MS Office files will be reviewed on this system, MS Office 2004 for Mac with Service Pack 1 and Update 11.1.1 should be installed. See the following for information on the service packs:

- Description of the Microsoft Office 2004 for Mac Service Pack 1 (11.1.0); Article ID: 883951, <http://support.microsoft.com/default.aspx?scid=kb;en-us;883951>
- Microsoft Office 2004 for Mac 11.1.1 Update - Available at Mactopia.com in the downloads area:
http://www.microsoft.com/mac/downloads.aspx?pid=download&location=/mac/download/office2004/update_1.1.1.xml&secid=4&ssid=14&flgnosysreq=True

File Scrub will NOT review MS Office files on computers using MS Office X for Mac.

Use these instructions to download File Scrub or File Scrub Trusted Copy. During the installation, you will be asked which version to install.

Downloading and Installing File Scrub Software

Obtain the Three Required Files

1. Save the `FileScrubKey.ser` file.

Put the `FileScrubKey.ser` file (which you received in the eligibility email as a result of submitting the Conditions of Use form) on the computer upon which you will be installing File Scrub. We recommend putting this file on the Desktop.

2. Download and Install the File Scrub Decryption Tool Setup file.

Right-click or Control-click on `FileScrubDecryptionToolMacSetup.command`. Depending on

your browser, choose Save Link Target As.... or Download Linked File. Save the file to your Desktop and close the download window.

From a Finder window on your Mac, double-click the Applications folder to view its contents.

Scroll down to the Utilities folder in the Applications folder contents pane. Double click-on the Utilities folder to view its contents.

Double-click Terminal.app.

From the command prompt in the terminal window, type the following two lines:

```
cd desktop  
chmod +xr FileScrubDecryptionToolMacSetup.command
```

Double-click on the FileScrubDecryptionToolMacSetup.command file from the desktop. A terminal window will open. You will see line “Initializing InstallShield Wizard...”. Continue to wait; depending on your computer speed, it may take up to a minute for the FileScrubDecryptionTool Installation window to display.

Read the license agreement and click the “I accept...” button, then the Next button. Follow the instructions to install the FileScrubDecryptionTool10 in your username folder. When you see the question “Do you want to execute the FileScrubDecryptionTool now?”, select No. Continue until the InstallShield wizard finishes, and click Finish.

On the Desktop, drag the FileScrubDecryptionToolMacSetup.command file to the trash and close the terminal window.

3. Download the File Scrub Encrypted Setup file.

From the File Scrub Website, right-click or Control-click on FileScrubMacSetup.enc. Depending on your browser, choose Save Link Target As.... or Download Linked File. Save the file to the Desktop and close the download window.

Run the File Scrub Decryption Tool

- 4.** Locate the FileScrubDecryptionTool10 folder in the Users/userhome/ folder. Open this folder. Drag the uninstall folder to the trash. Double-click on the FileScrubDecryptionTool.app.
- 5.** Following the directions in the File Scrub Decryption Tool window, browse to the Desktop and select the .enc and .ser files.

6. Click on the Decrypt button.

Please be patient; depending on your system, the decryption process can take a minute.

The name and location of the decrypted **output** file, `FileScrubMacSetup.command`, will fill the previously blank “Decrypted file written to” field when the decryption is complete. The decrypted file is written to the same location as the encrypted **input** file, `FileScrubMacSetup.enc`.

Install File Scrub

7. Select the “Launch File Scrub Setup Wizard” button. A terminal window will open. You will see line “Initializing InstallShield Wizard...”. Continue to wait; depending on your computer speed, it may take a few seconds for the FileScrub Install window to display.
8. Read the license agreement and click the “I accept...” button, then the Next button. Select which version of File Scrub you want to install. Follow the instructions to install `FileScrub10` or `FileScrubTrustedCopy10` in your username folder.
9. If you want to run File Scrub (or File Scrub Trusted Copy), click Yes when you see the question “Do you want to run the File Scrub (Trusted Copy), Version 1.0 now?” If not, select No and continue until the InstallShield wizard finishes, and click Finish. You can then close the terminal window.
10. The `FileScrub10` (or `FileScrubTrustedCopy10`) folder contains the File Scrub application and all included documentation. Double-click the folder and then the File Scrub application to run File Scrub. You can also drag the application icon to the Dock for simple access in the future.
11. You can now delete `FileScrubMacSetup.enc` and `FileScrubDecryptionToolMacSetup.command` from the Desktop. Right-click or Control-click to send these files to the trash. You can delete the `FileScrubDecryptionTool10` from the Applications (or Users/userhome/) folder or keep it in case you need to reinstall File Scrub. Keep the `FileScrubKey.ser` file for the same reason.

Run File Scrub

To run File Scrub, simply double-click on the File Scrub application file (`FileScrub.app`) in the `FileScrub10` folder where File Scrub was installed.

Uninstalling File Scrub

1. From the Finder, navigate to the directory where the File Scrub software was installed.
2. Drag the `FileScrub10` (or `FileScrubTrustedCopy10`) folder to the trash.

Note: After dragging the FileScrub10 (or FileScrubTrustedCopy10) directory to the trash, check the File Scrub folder/directory for files that must be removed manually. Leave the cleansed and logfile folders that are in your <userhome>/File Scrub folder/directory, as they have your previously reviewed files and logs. You may remove the Config file if you do not have custom settings you want to keep for another File Scrub installation. You can delete any remaining files.
